Frozen rate-grid weights

covid | horizon 2 | United States (US) | seasons 2024/25 and 2025/26 | log1p(counts) updates | feedback delay 2 week(s)

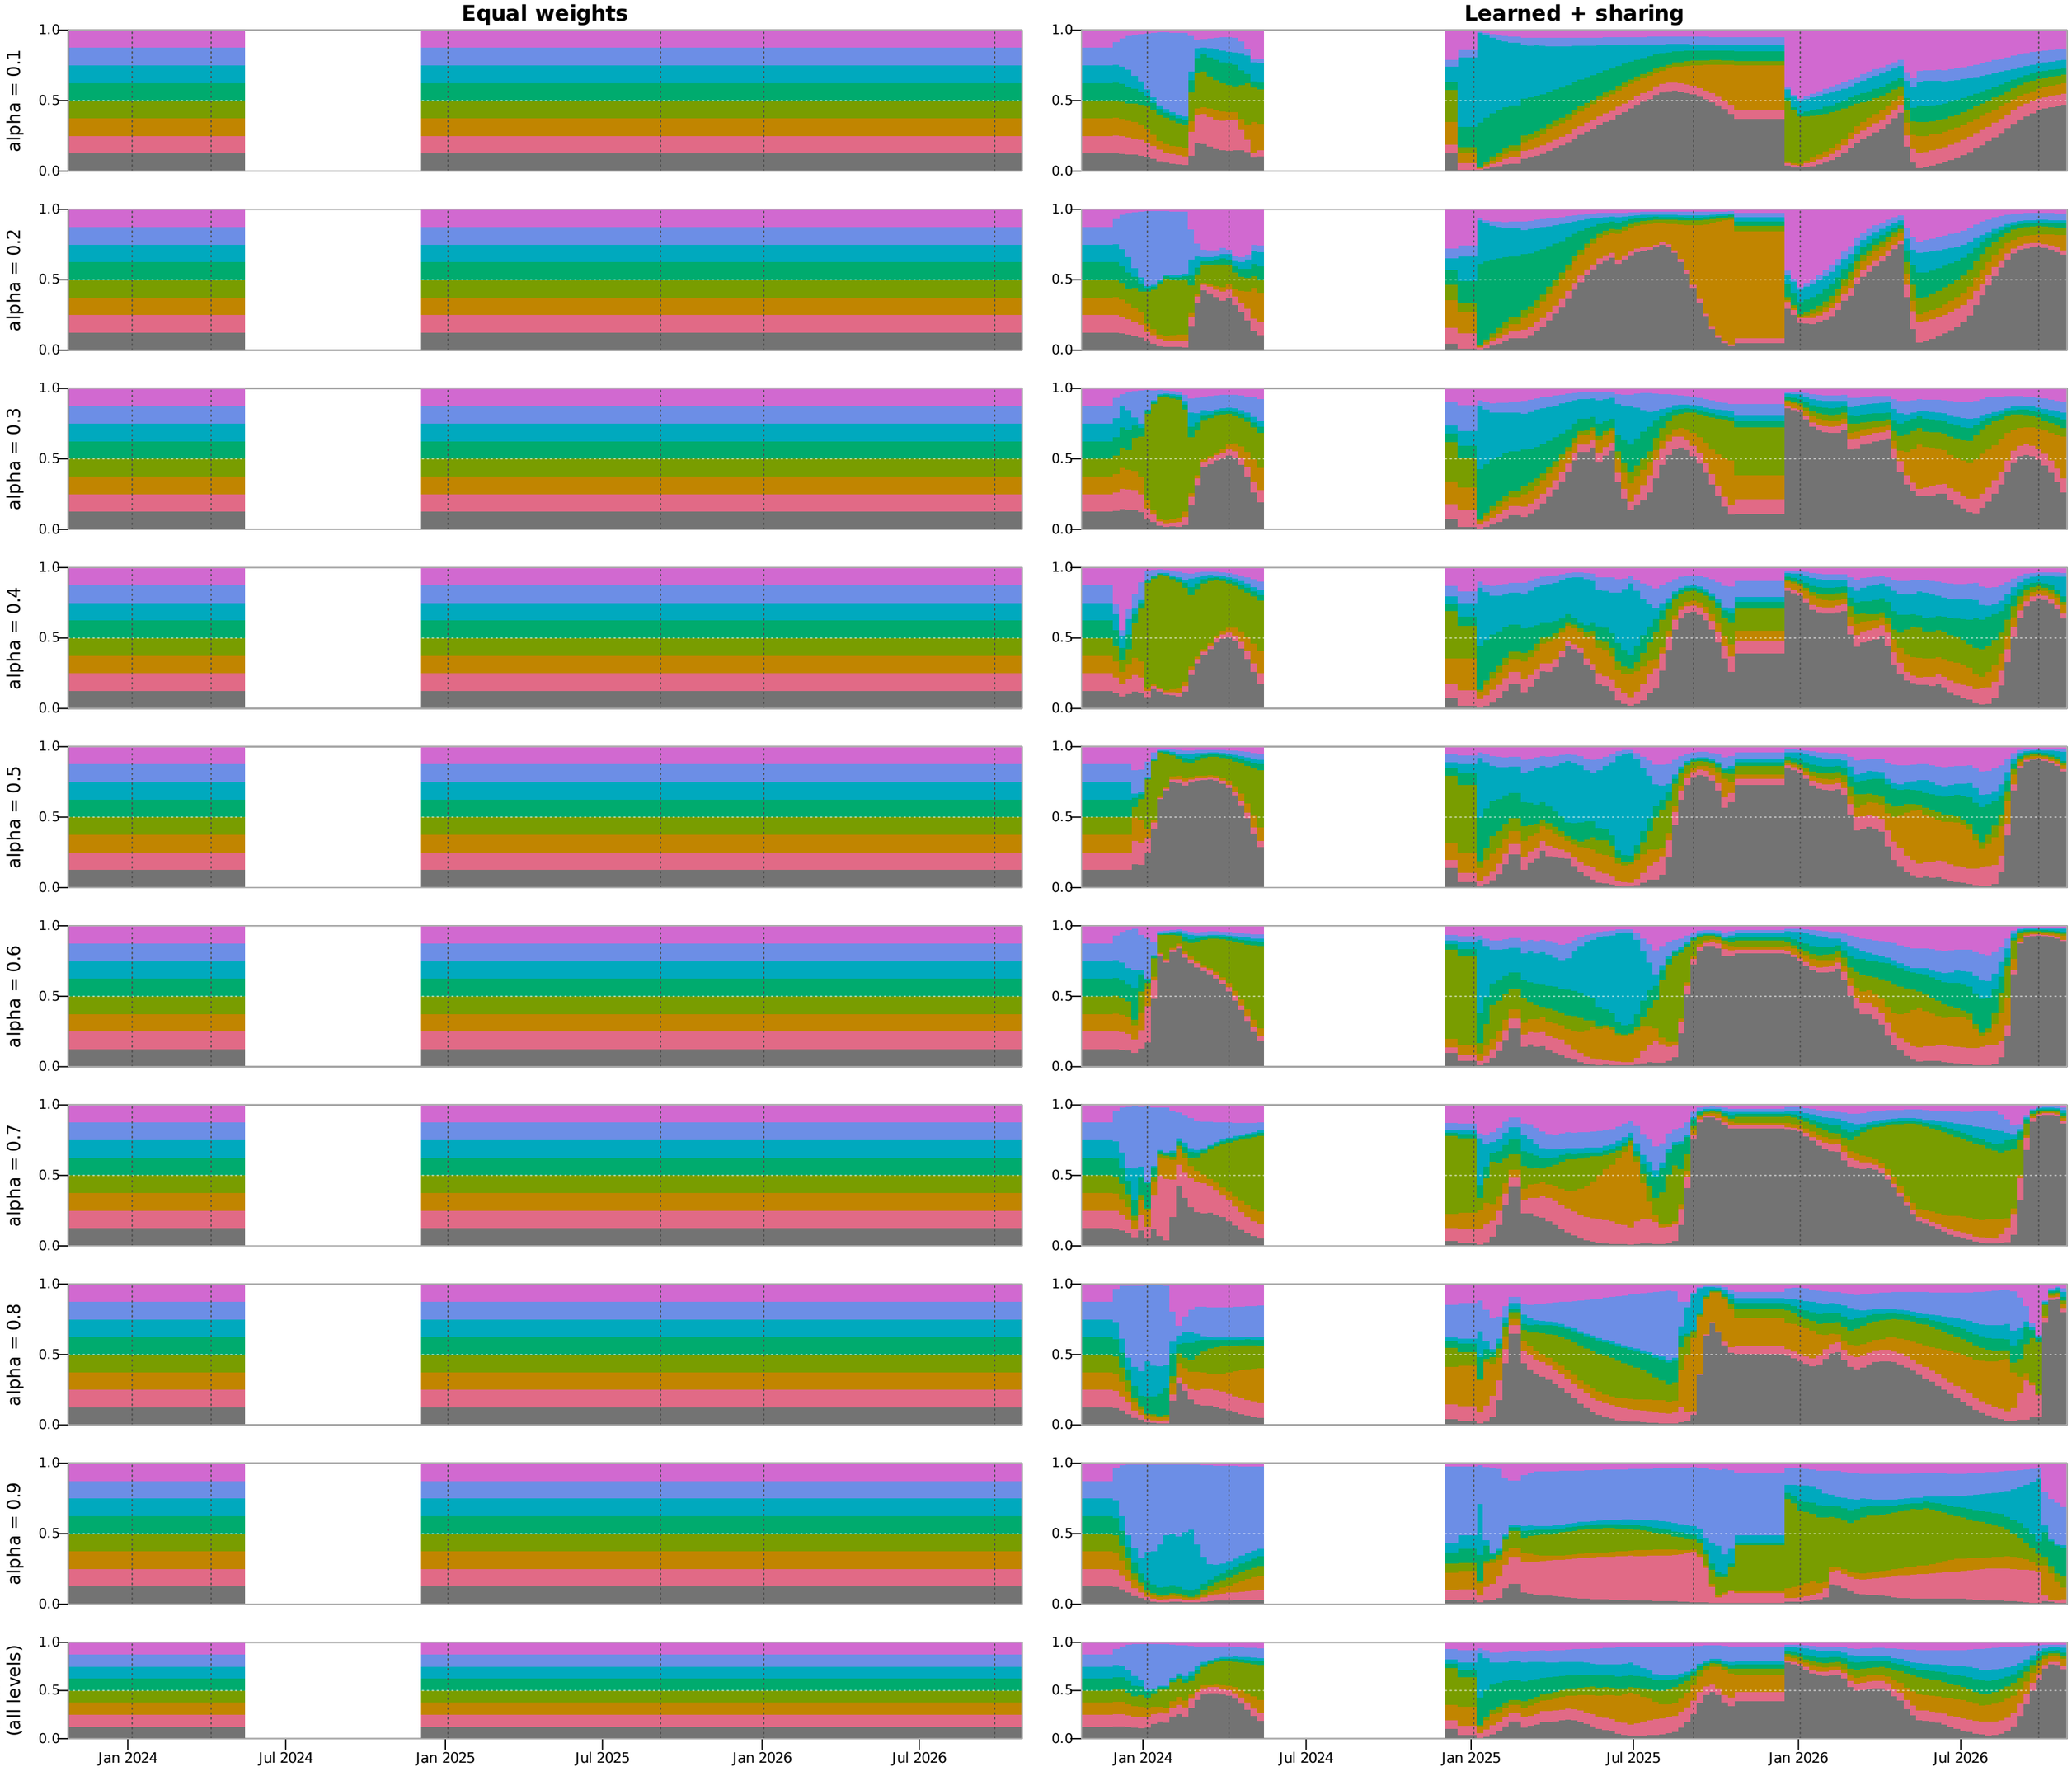

Target date | Weight at issuance for each target | Dotted lines: peaks

Rows alpha = 0.1-0.9: one weight vector per quantile level. Last row: one weight vector for all levels, learned from the mean pinball loss.

Diverse expert weights

covid | horizon 2 | United States (US) | seasons 2024/25 and 2025/26 | log1p(counts) updates | feedback delay 2 week(s)

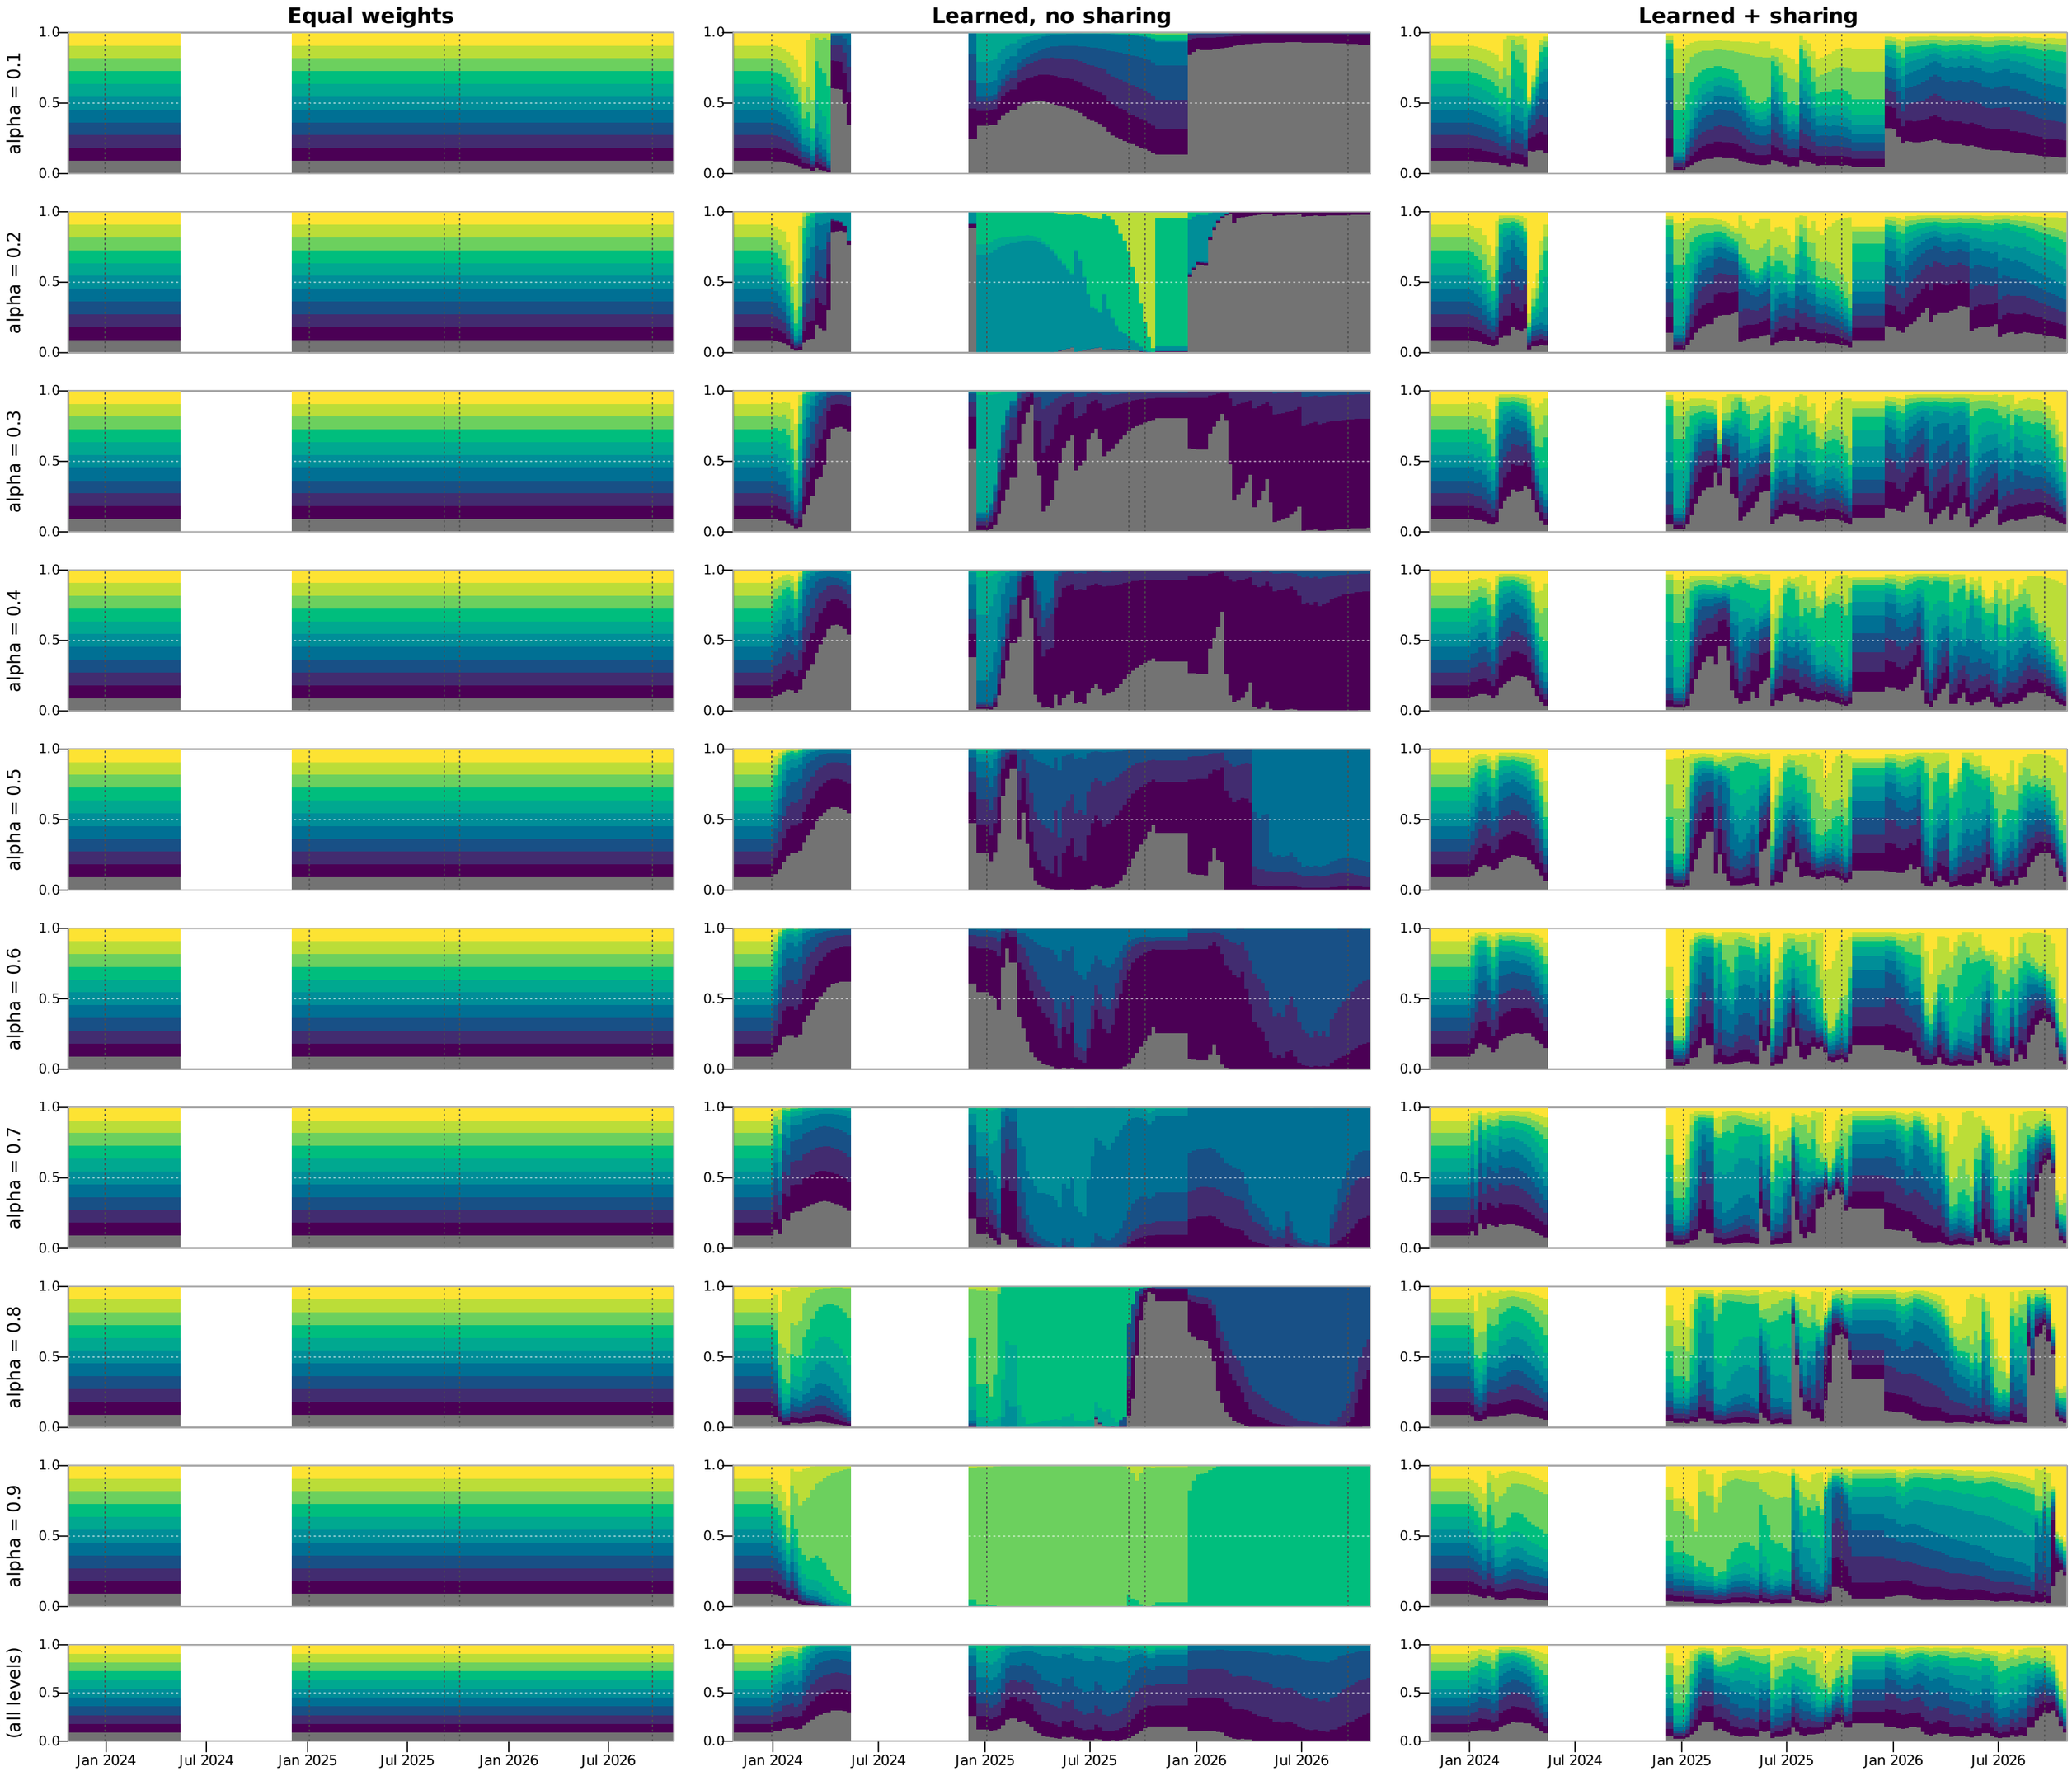

Target date | Weight at issuance for each target | Dotted lines: peaks

Rows alpha = 0.1-0.9: one weight vector per quantile level. Last row: one weight vector for all levels, learned from the mean pinball loss.

Frozen rate-grid weights

covid | horizon 2 | California (06) | seasons 2024/25 and 2025/26 | log1p(counts) updates | feedback delay 2 week(s)

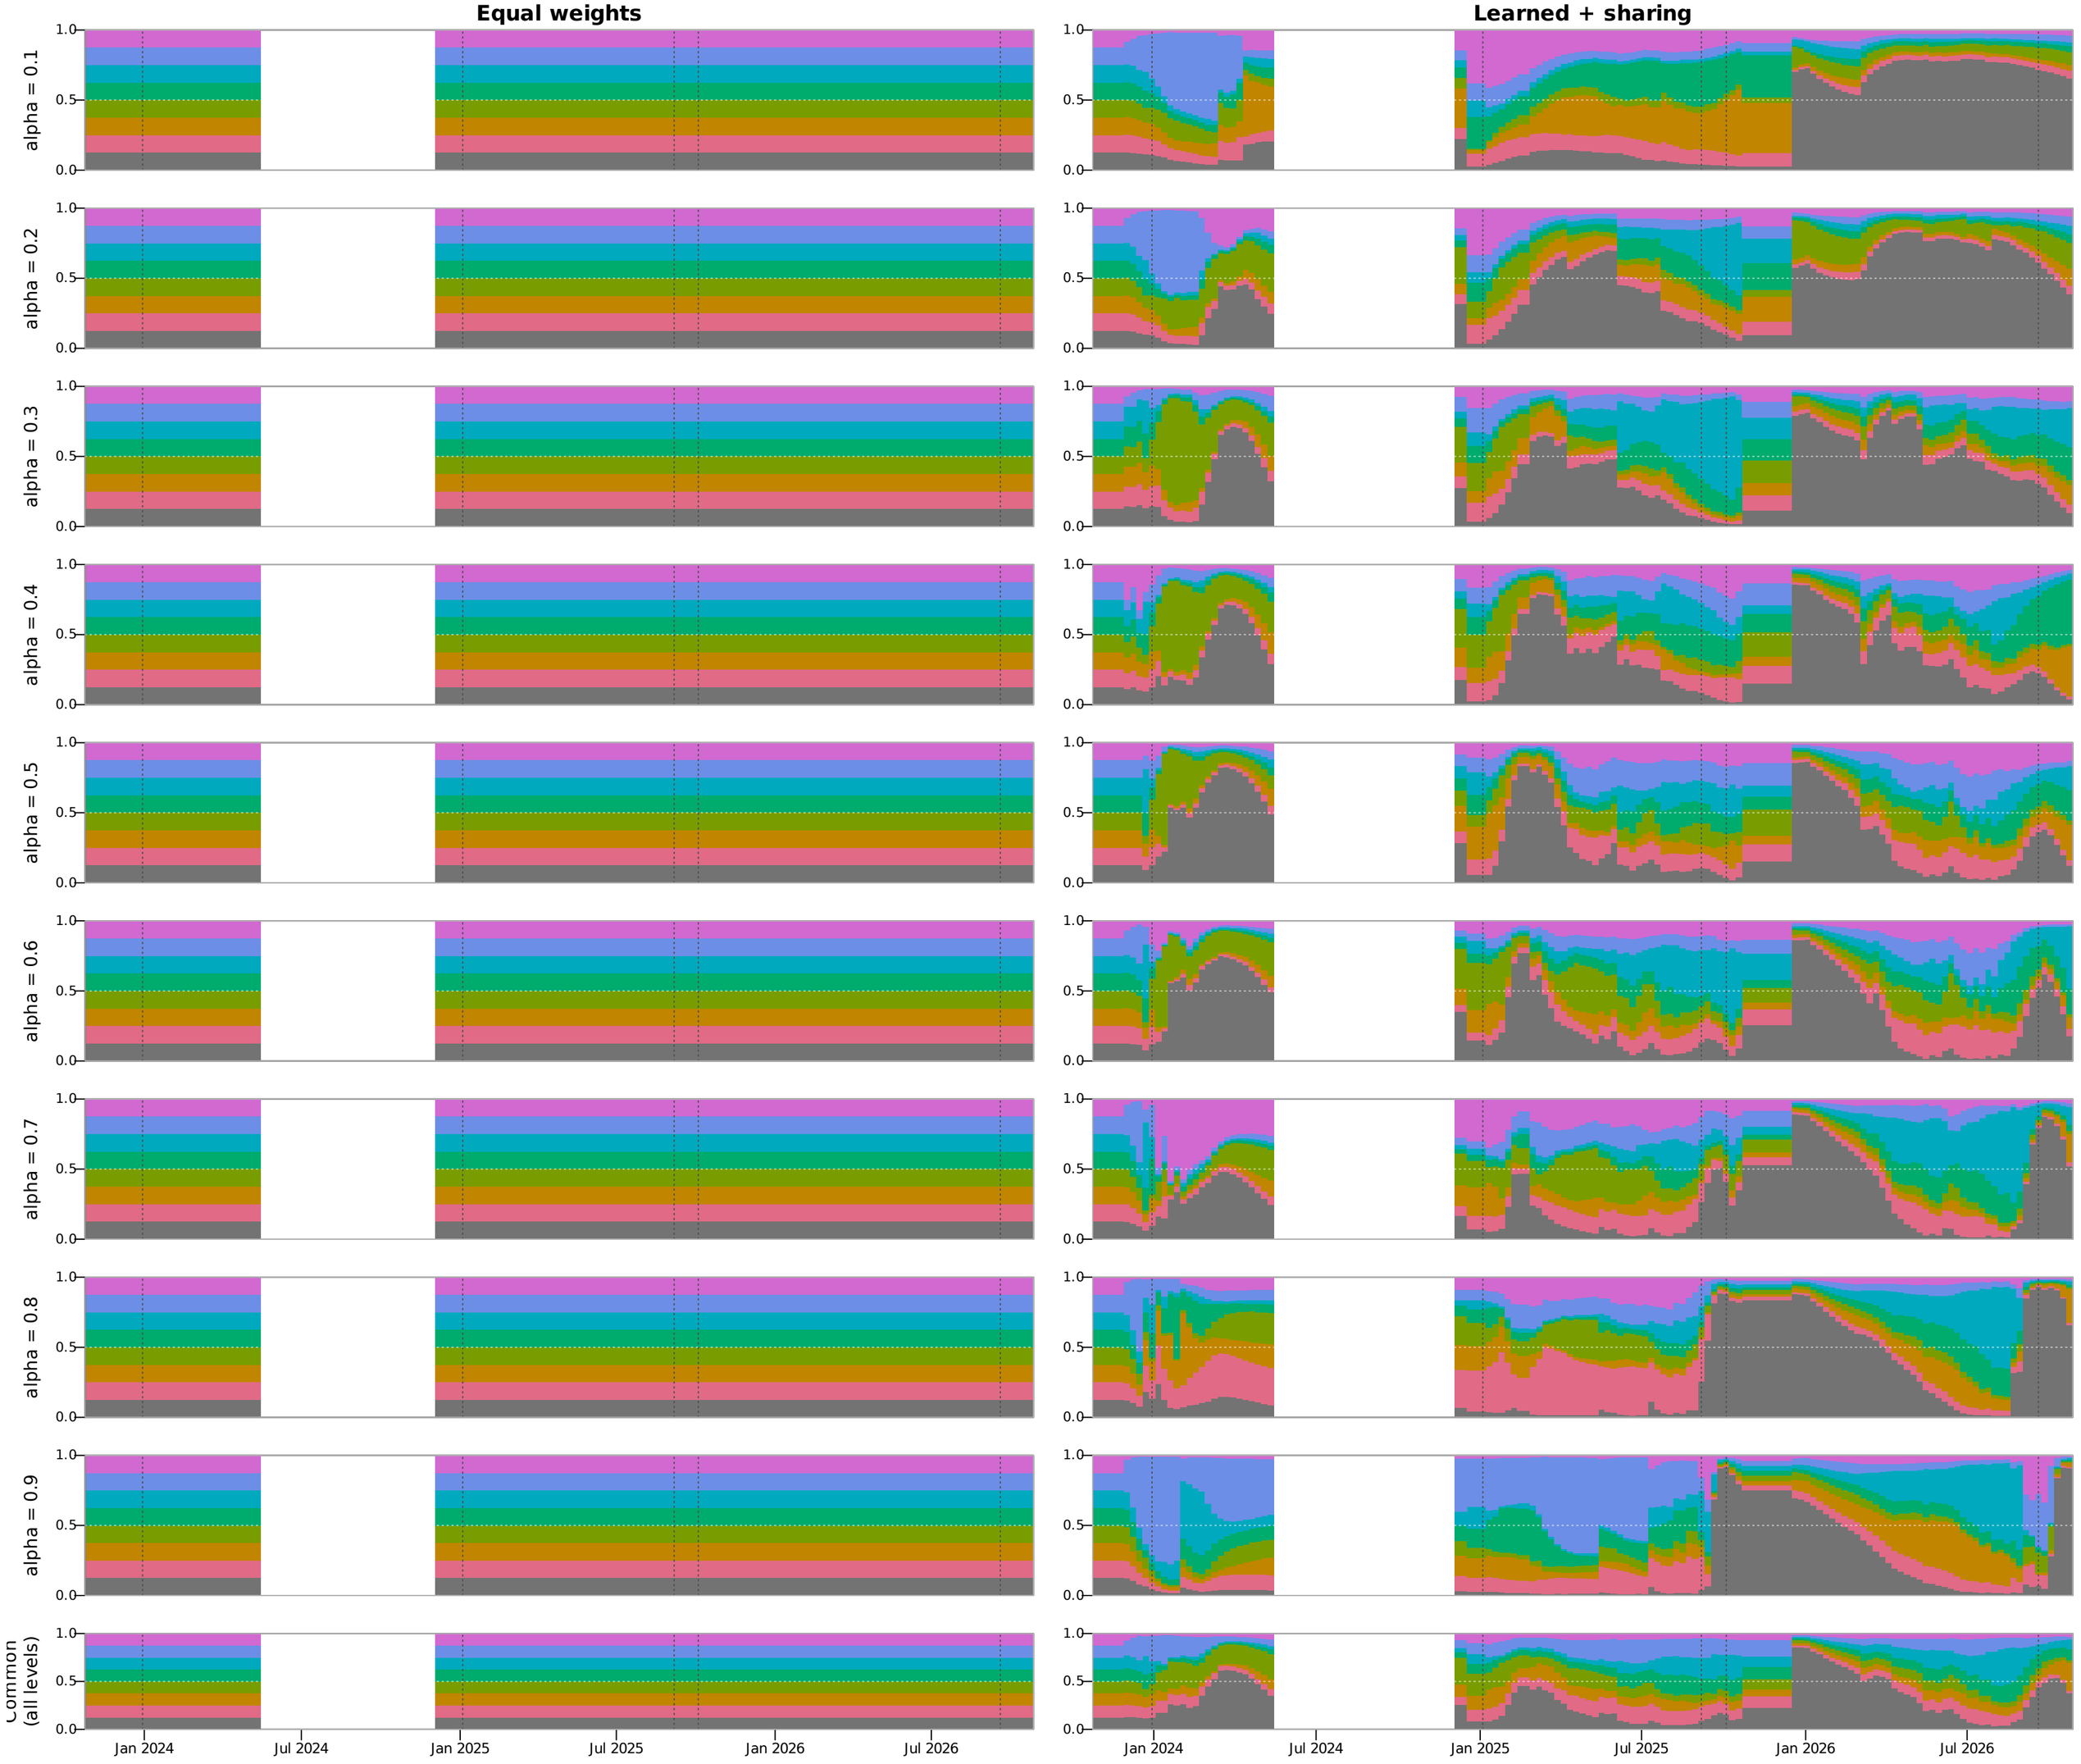

Target date | Weight at issuance for each target | Dotted lines: peaks

Rows alpha = 0.1-0.9: one weight vector per quantile level. Last row: one weight vector for all levels, learned from the mean pinball loss.
