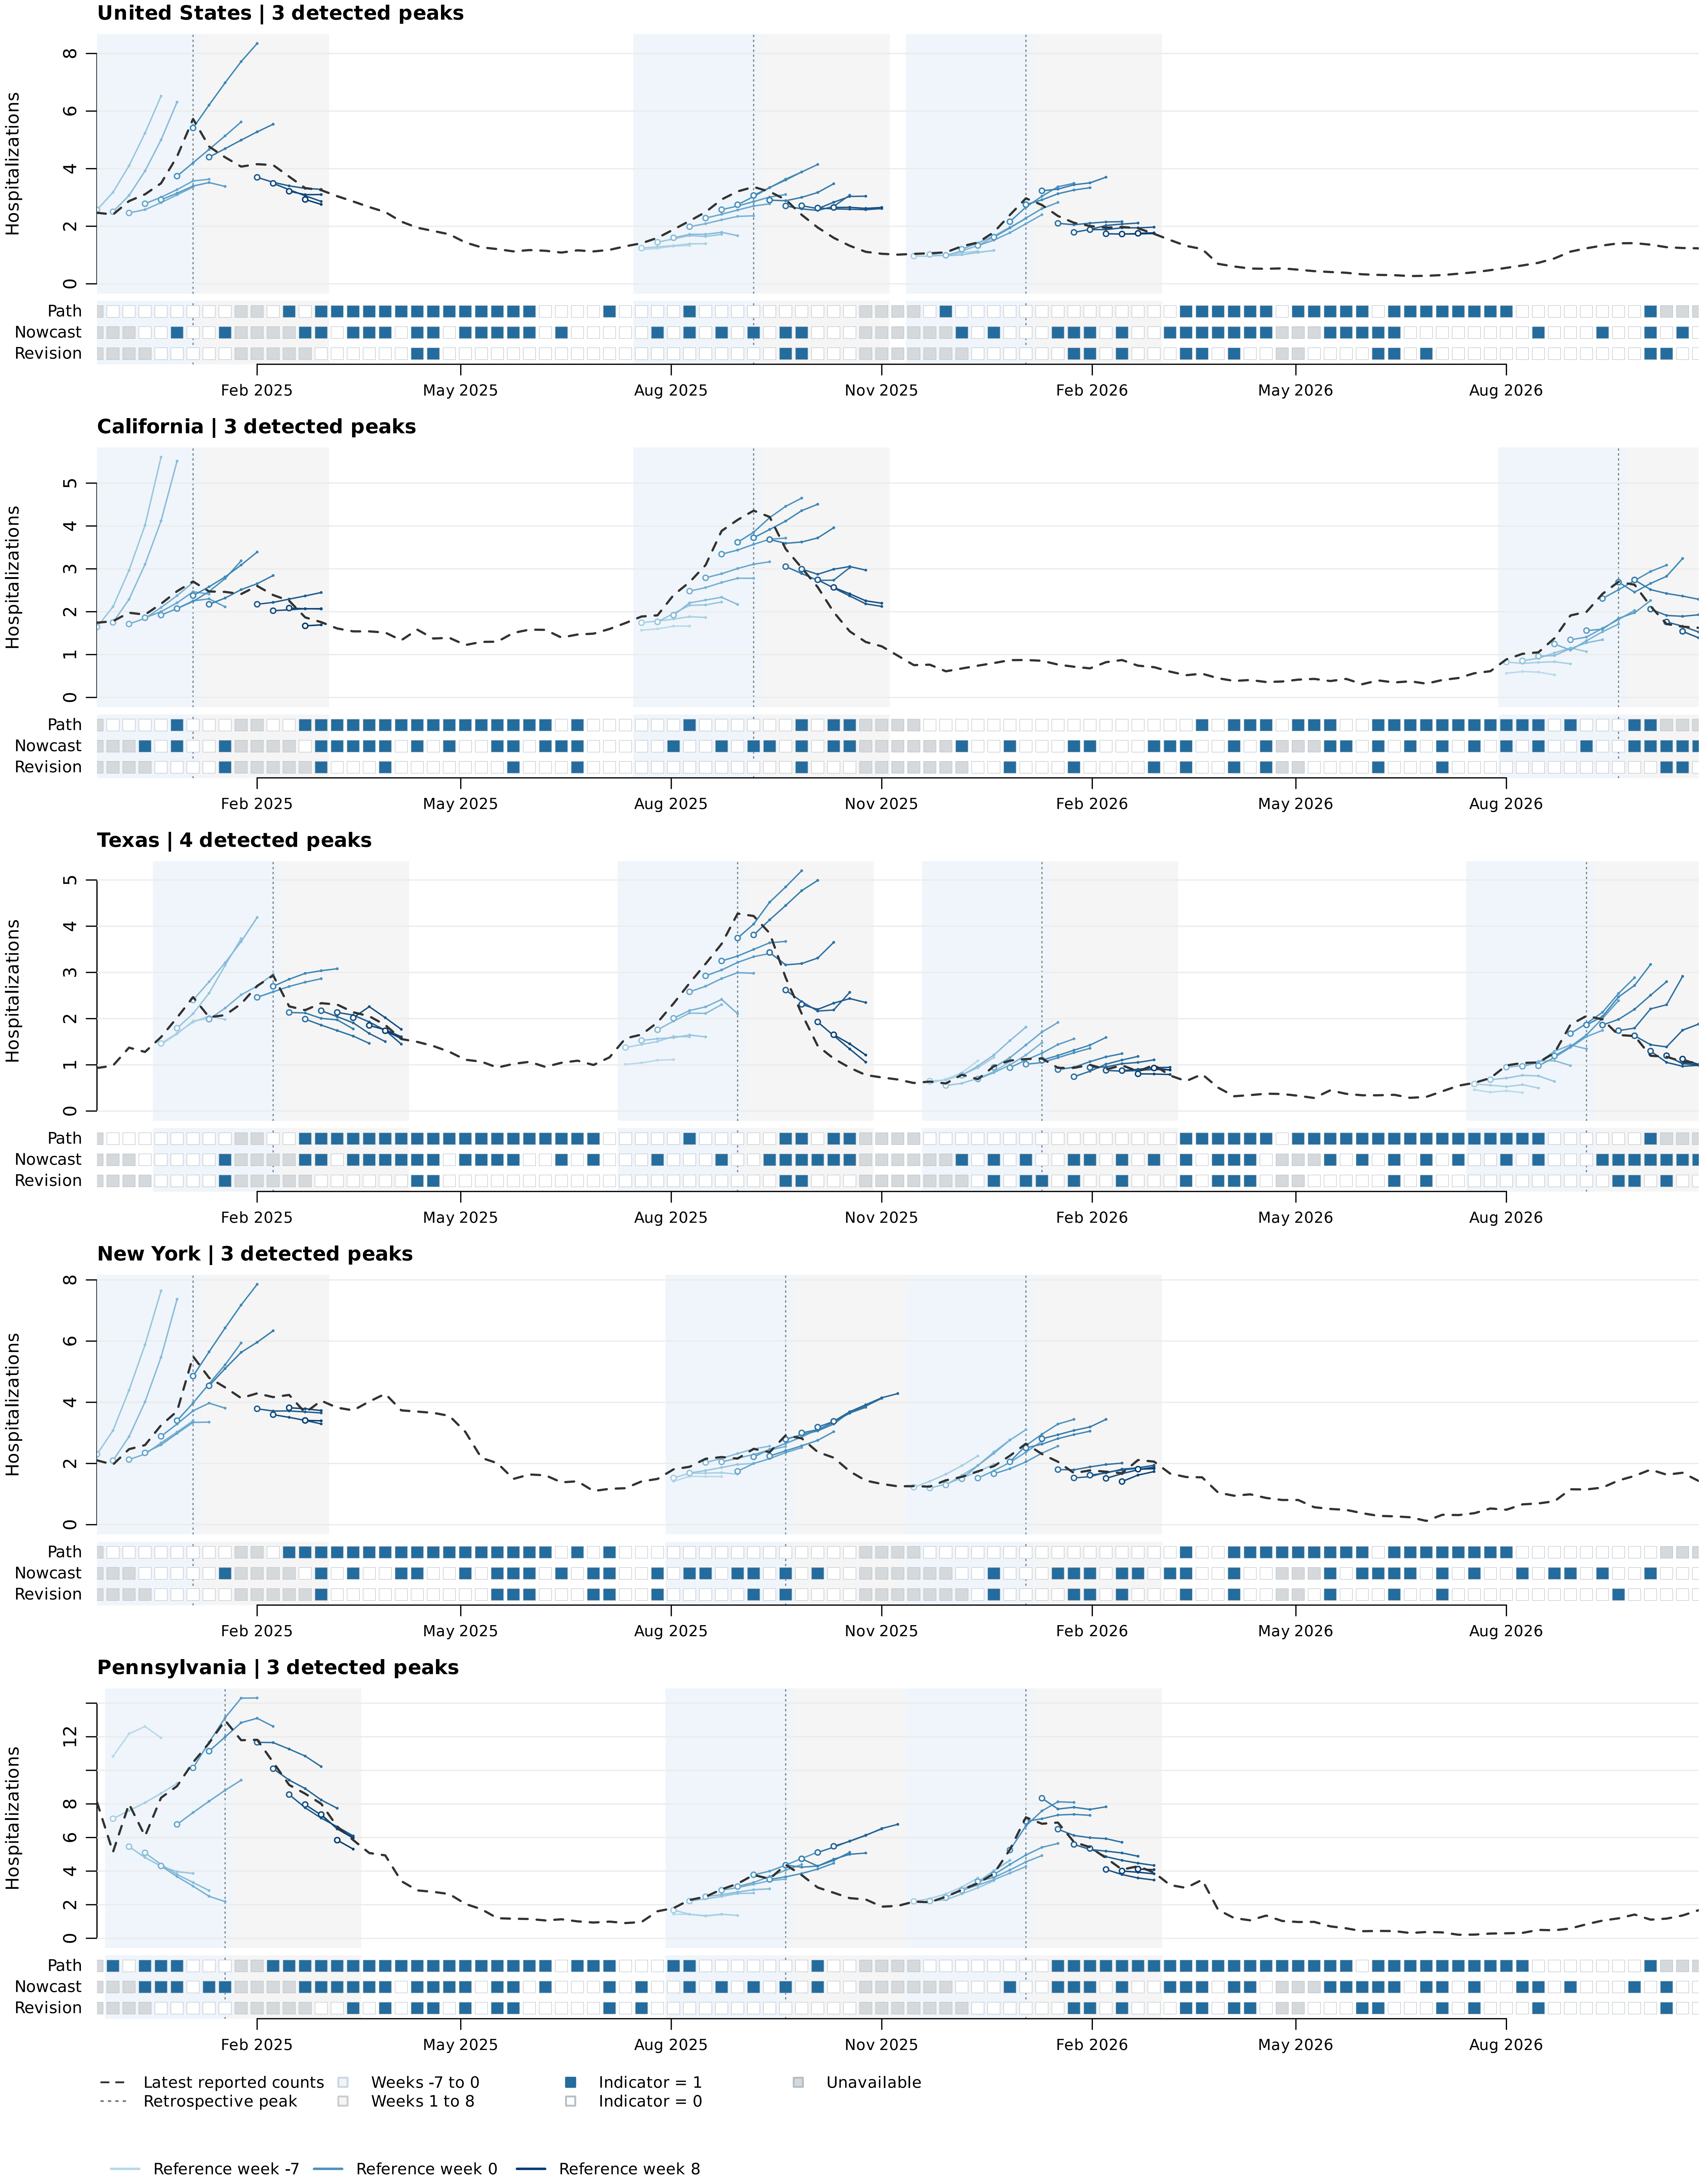
COVID | Base forecast paths and three indicators

cmu_hub | counts per 100k residents | All peaks from script 01 | Indicators: score > log(1.05)

Blue curves: one reference week, horizons -1 to 3; darker = later within each peak window. Open point: h = -1.



Timeline x-axis: target date. Indicator x-axis: reference date, using its cutoff. Same calendar scale; gray cells mean unavailable, not zero.

Blue curves use reference weeks -7 to 8 and are clipped to the same target-date windows. Counts and peak dates are retrospective.

Path: fall across horizons. Nowcast: fall or slowing growth. Revision: downward same-target revisions that become more negative.
