COVID | Fixed-rate MultiQT: calibration error vs mean quantile loss, mean over quantile levels

Count tracking | eta = m * S0, S0 frozen after 20 released rows (warmup replayed) | Feedback delay 2 week(s) | Scored against latest reported counts in counts per 100k residents per location | Lower left is better.

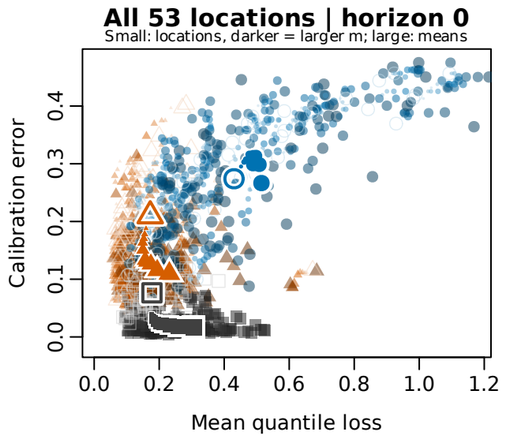

All 53 locations | horizon -1

Small: locations, darker = larger m; large: means
