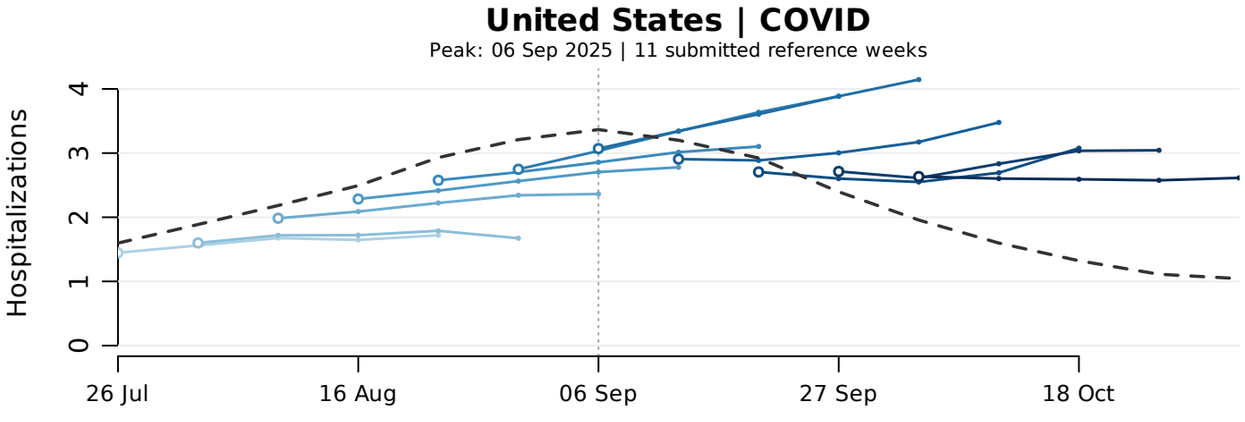
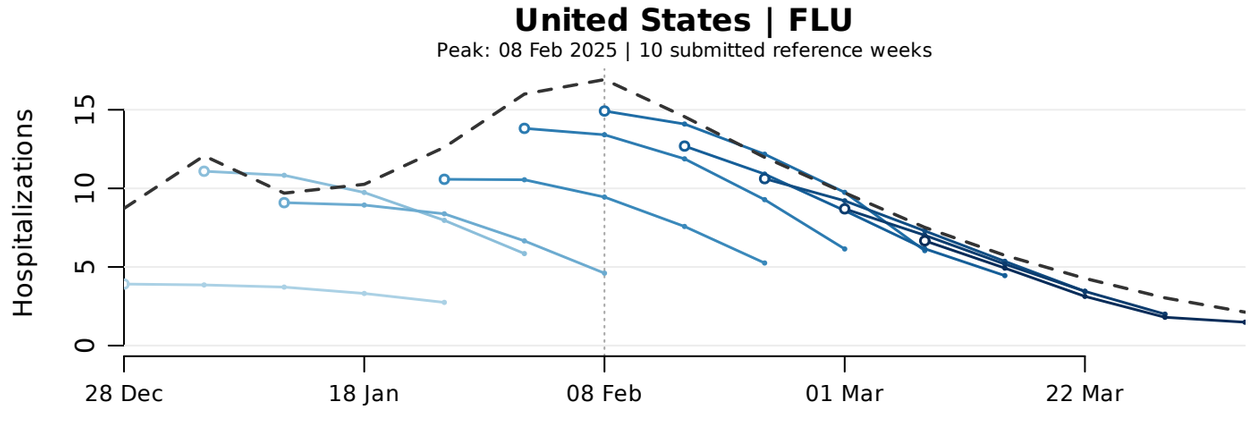
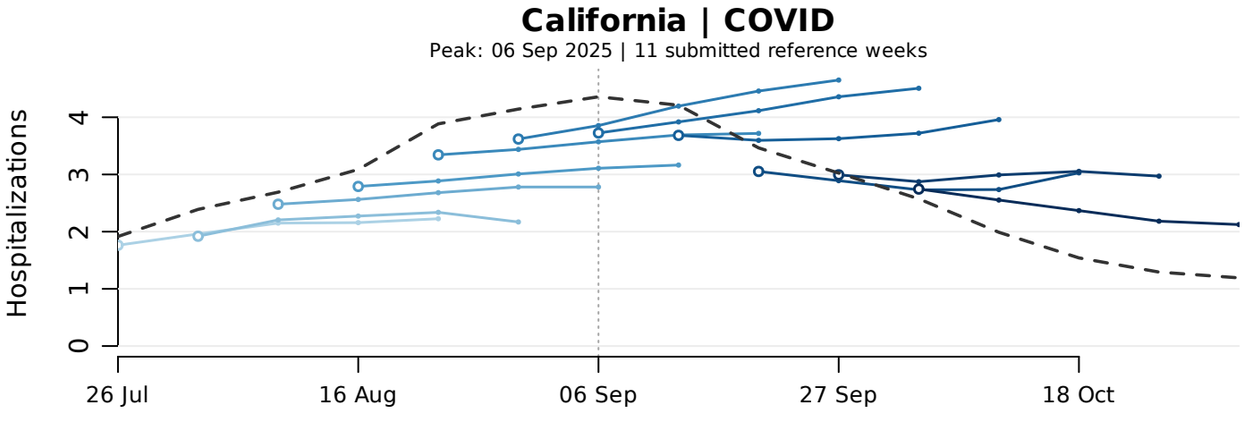
CMU base forecasts: five-horizon median curves around the selected peaks

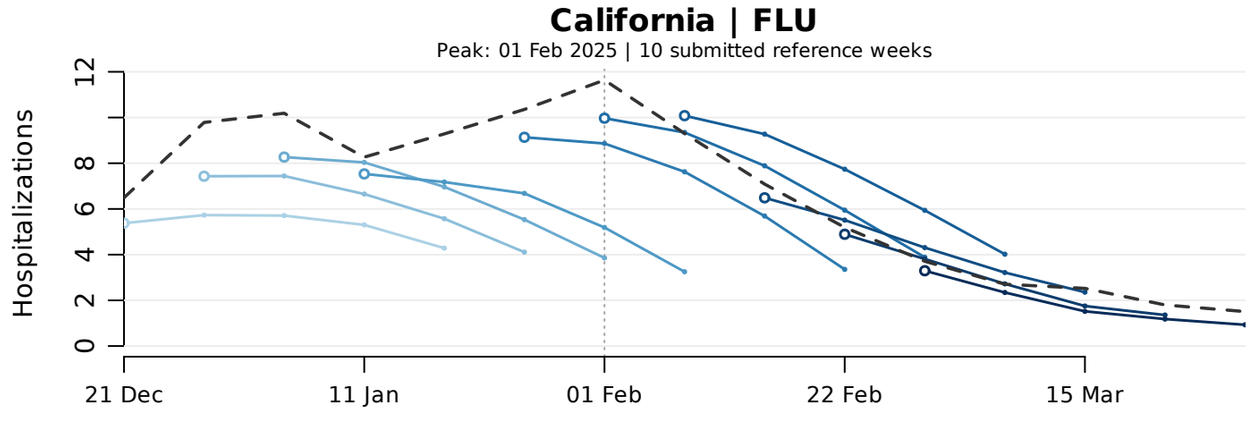
COVID 2024/25 summer | FLU 2024/25 winter | counts per 100k residents

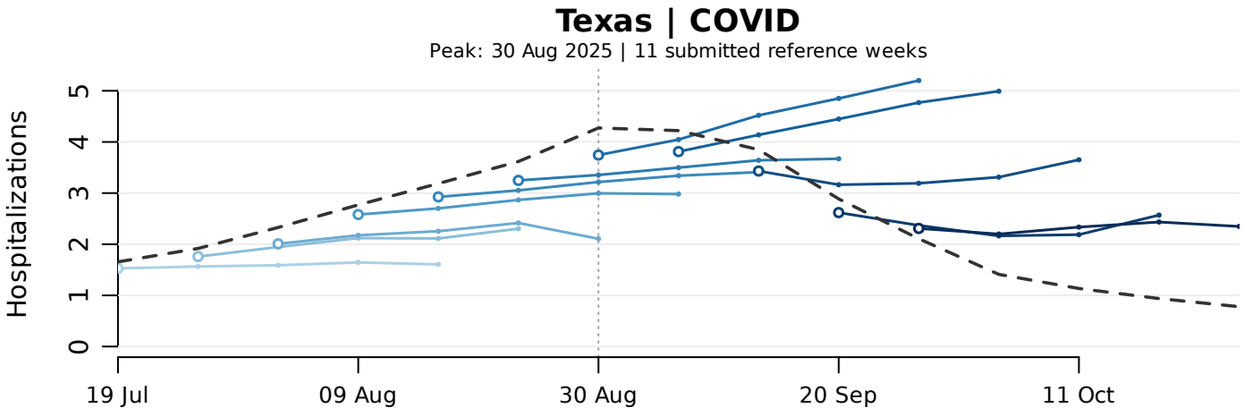
Each curve: one reference week, horizons -1 to 3. Darker = later reference week relative to the local peak.

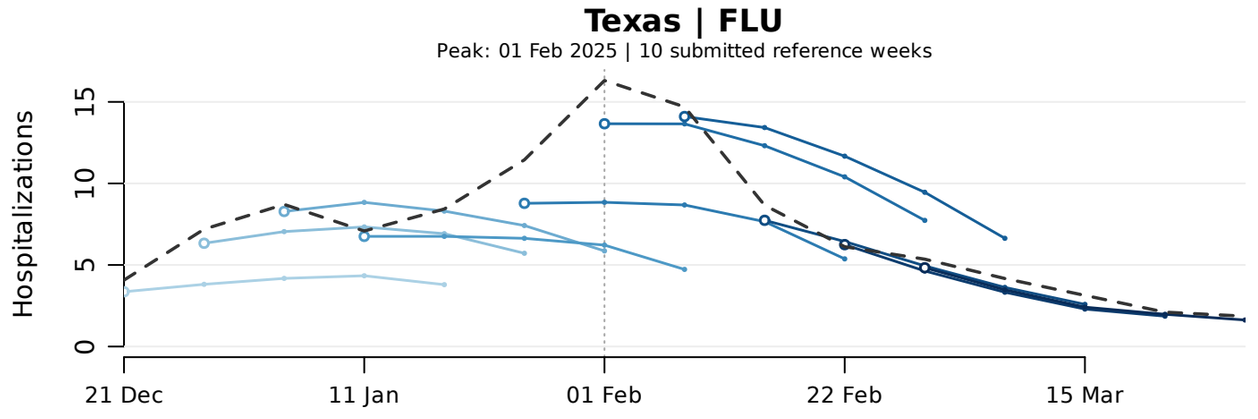


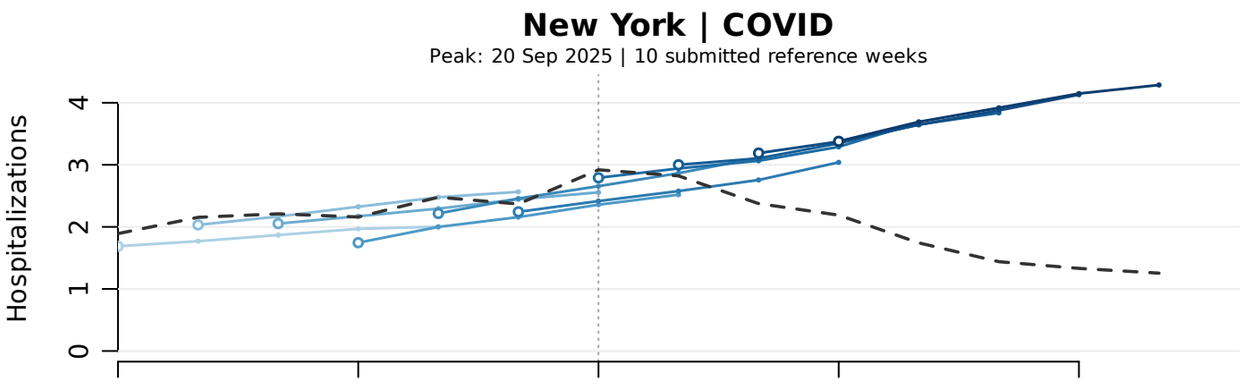


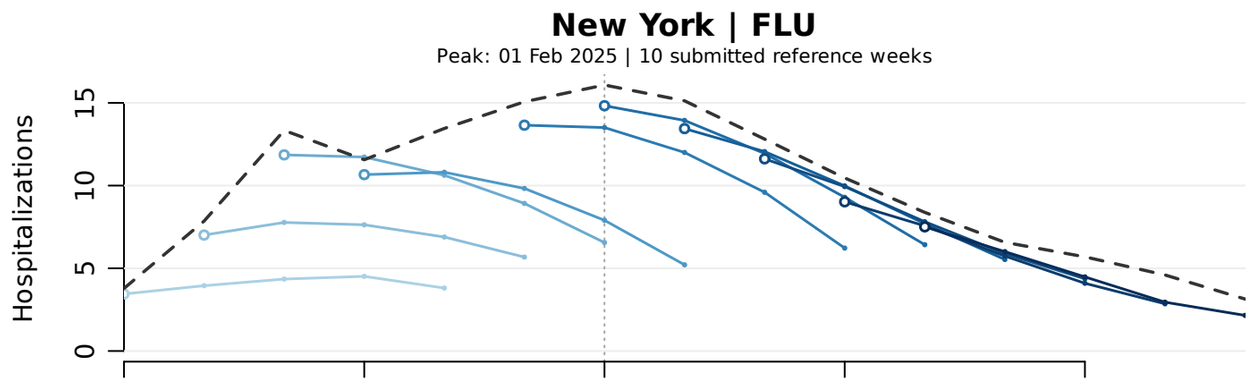


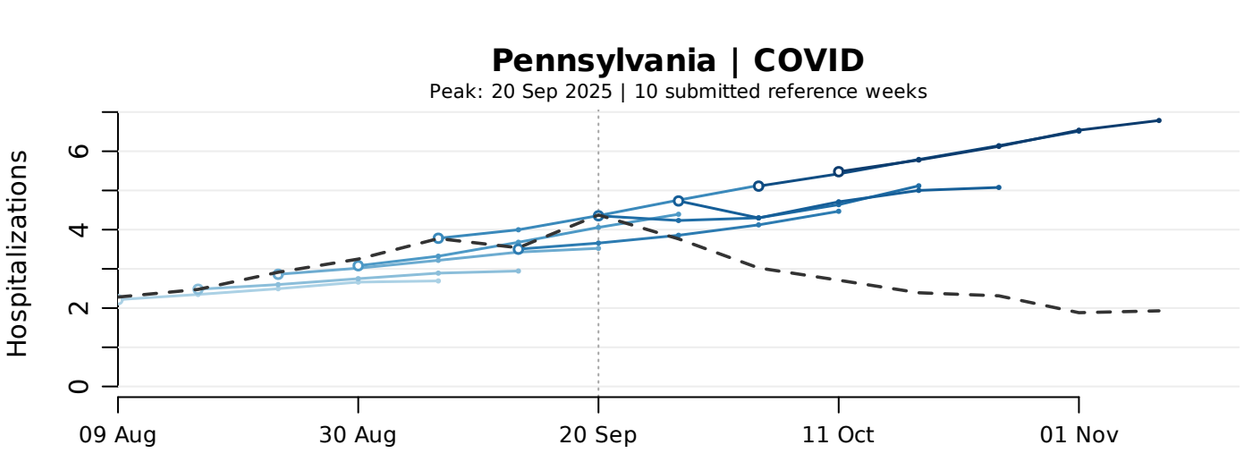


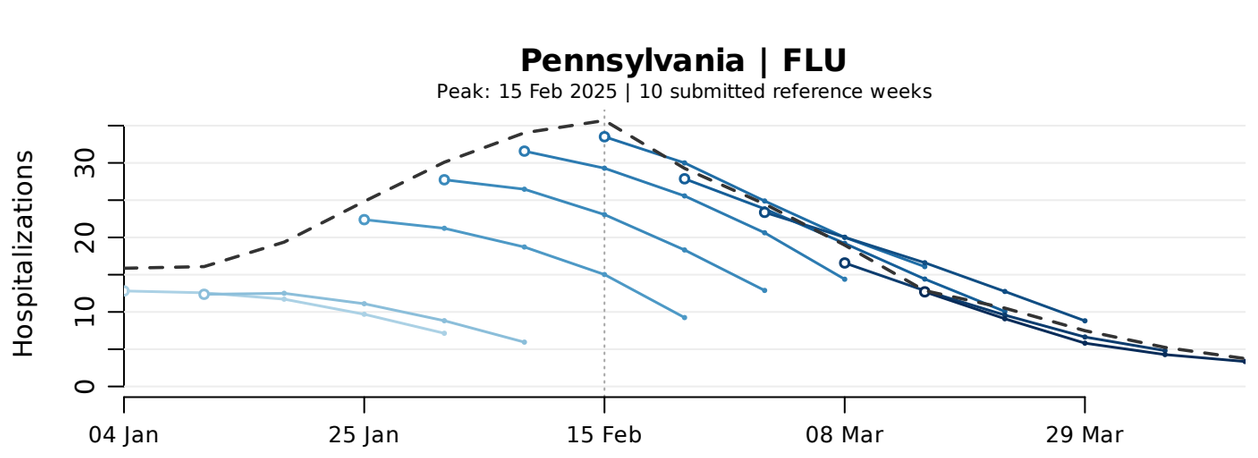


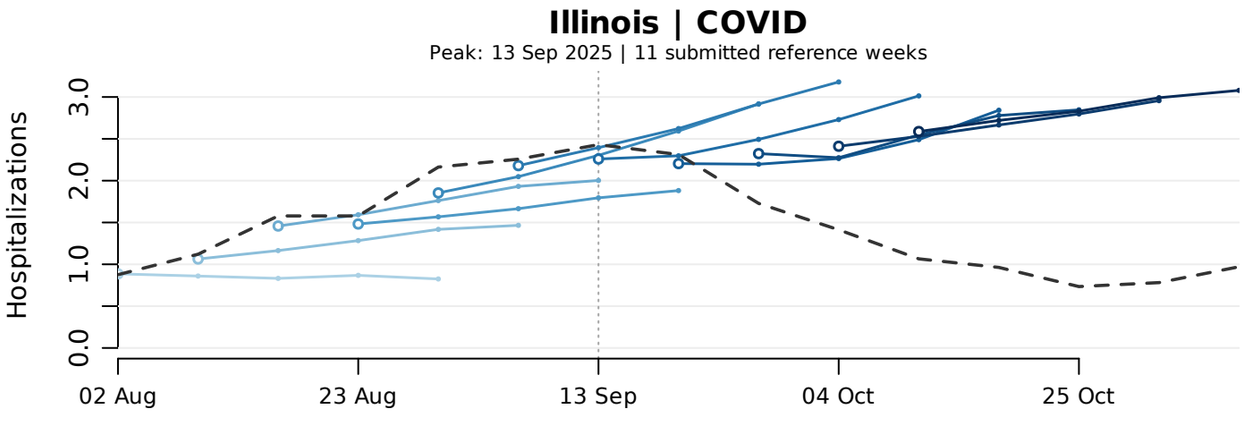


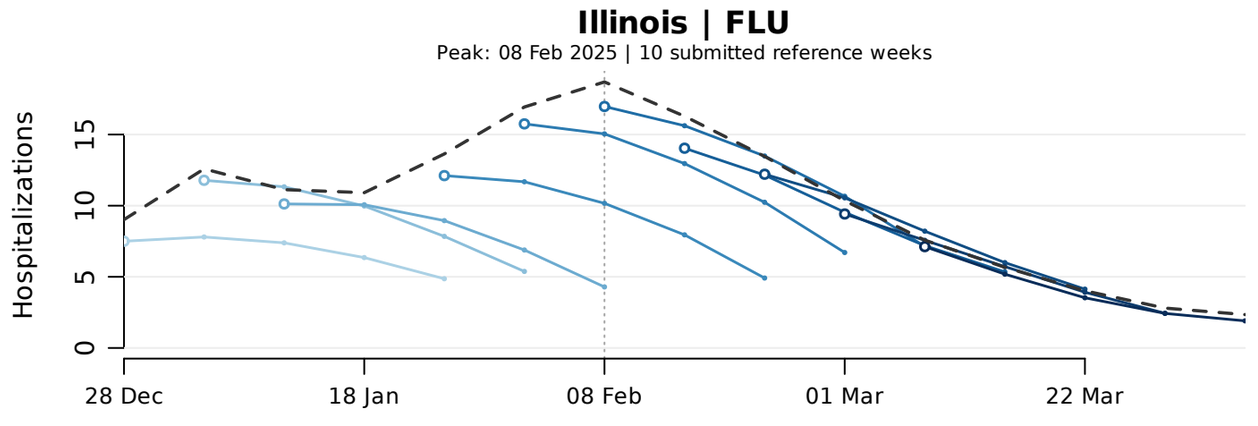


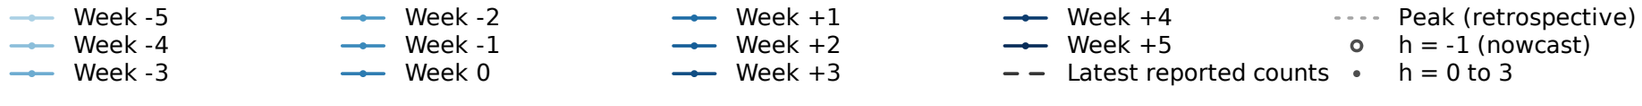












Horizontal axis: target week ending. Target date = reference date + 7h days. Raw CMU submissions; missing rounds stay missing.

Observed counts and peak dates use the latest stored reports and are retrospective. Reference dates label weeks, not exact submission times.
